

# Supercharge your Applications with Google's Duet AI

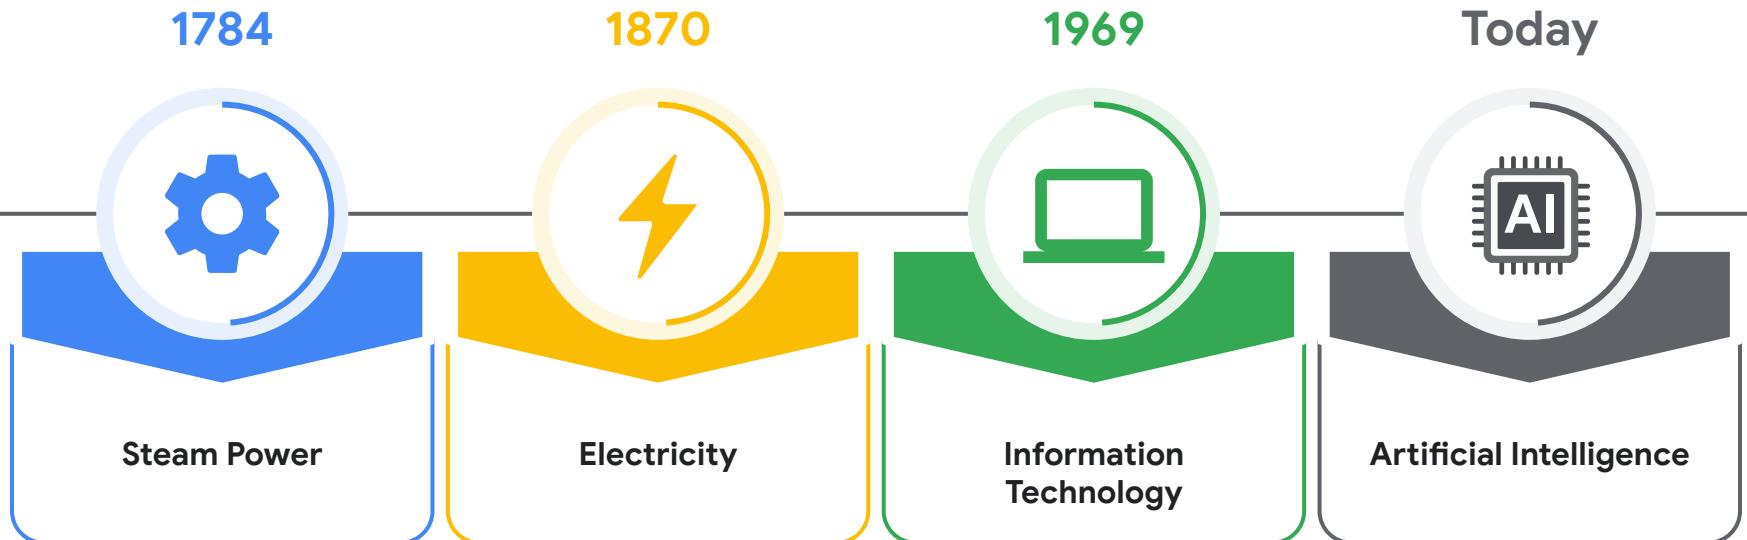

Google Developer Groups, Cloud, Chennai  
February 16, 2024

Kiran Vasudevan, Customer Engineer  
Application Modernization

# We're in an AI-driven revolution

# AI Journey @ Google

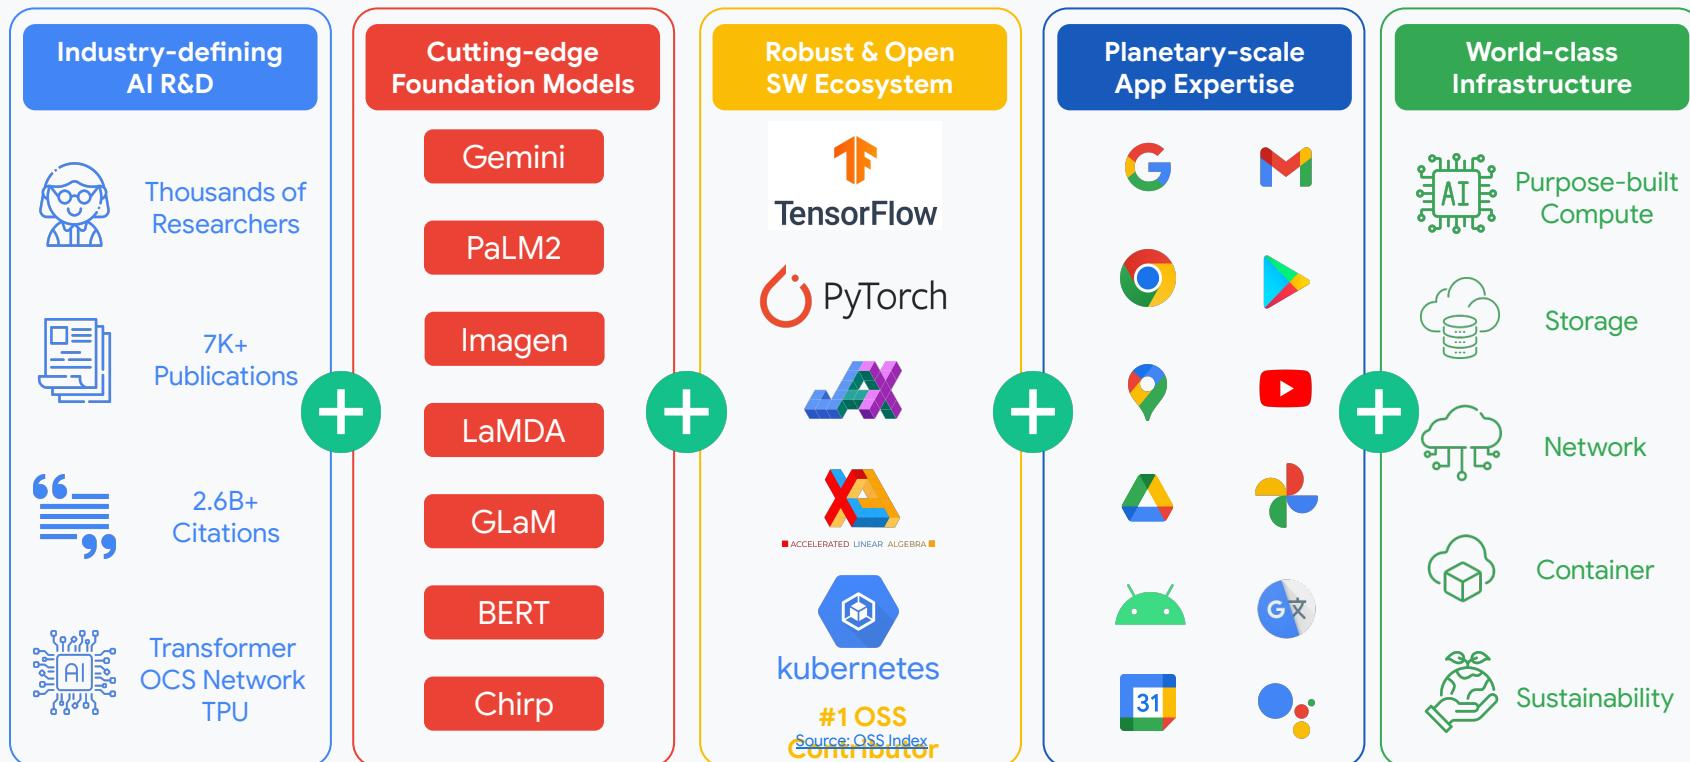

# The next chapter of Generative AI innovation

Gemini is the most capable and general model we've ever built, and is the result of a large-scale collaborative effort by teams across Google, including Google DeepMind and Google Research.

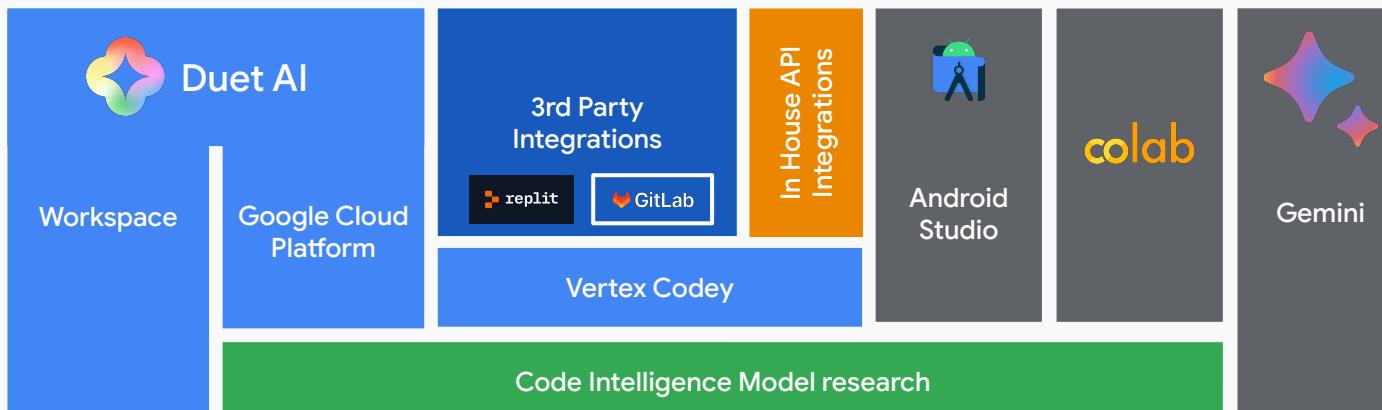

# AI Collective at Google

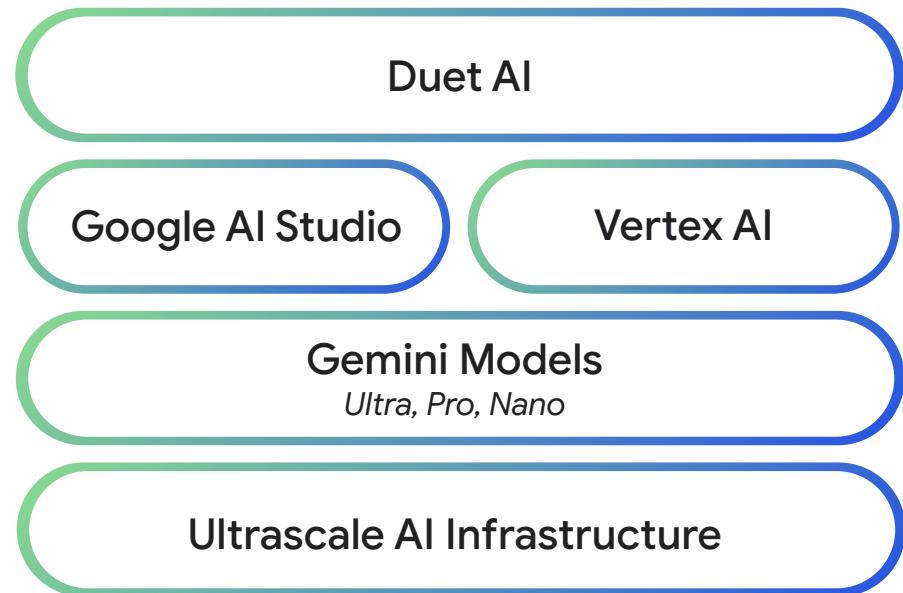

# Supporting developers with Google's Generative AI

Developer Facing Applications

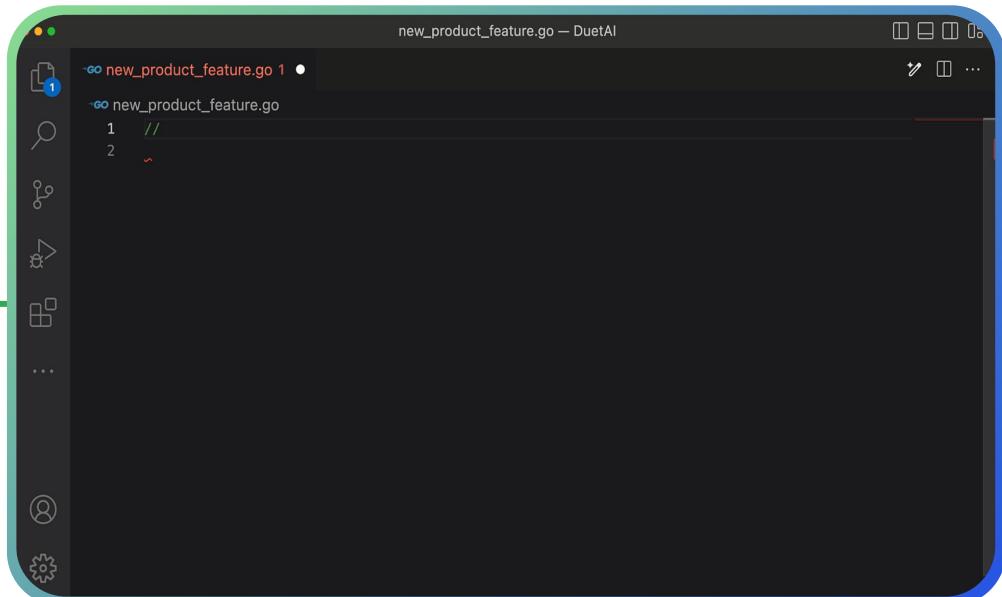

**Generative AI is built on  
a vertically integrated  
technology stack**

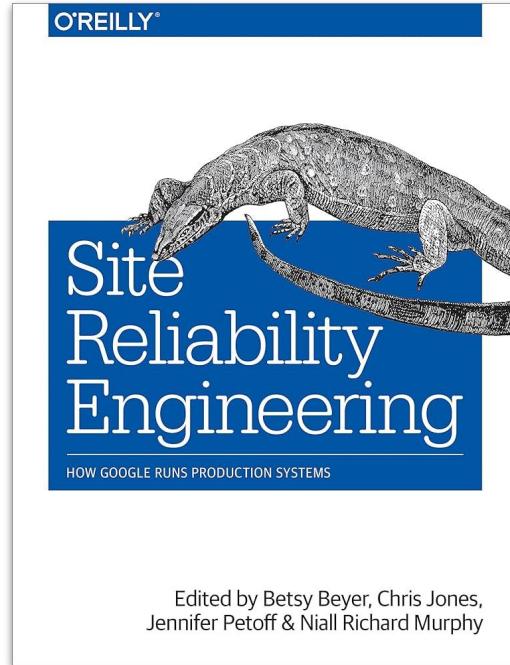

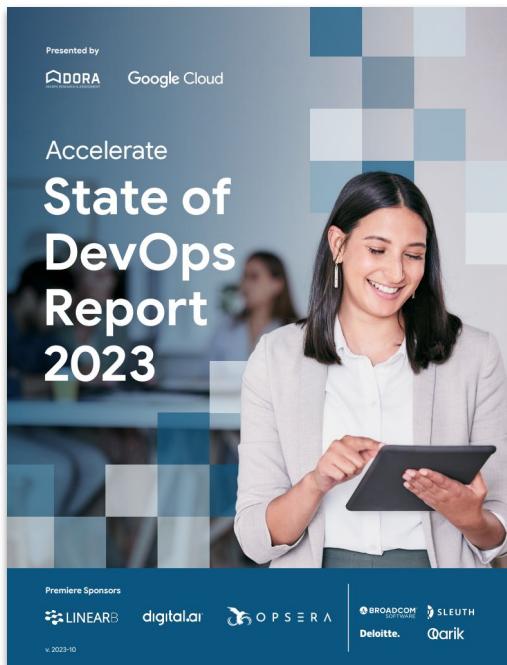

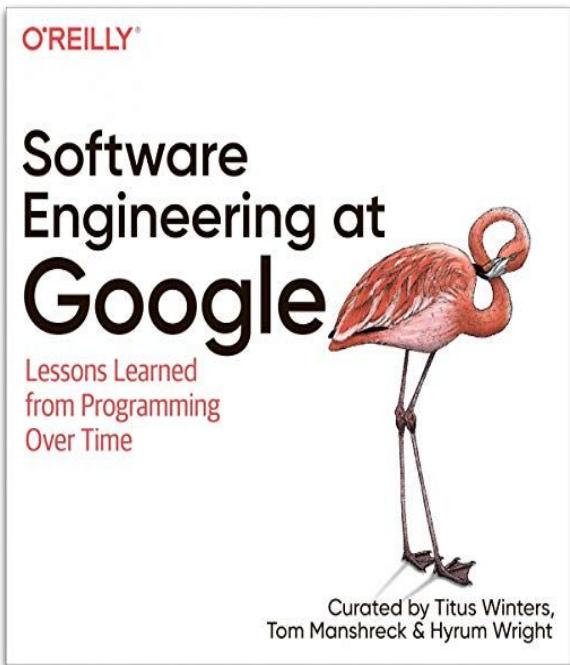

# Duet AI for Developers provides AI-powered:

- Code completion
- Code generation
- Code refactoring
- Documentation generation
- Unit test generation
- Application deployment
- Operational diagnostics

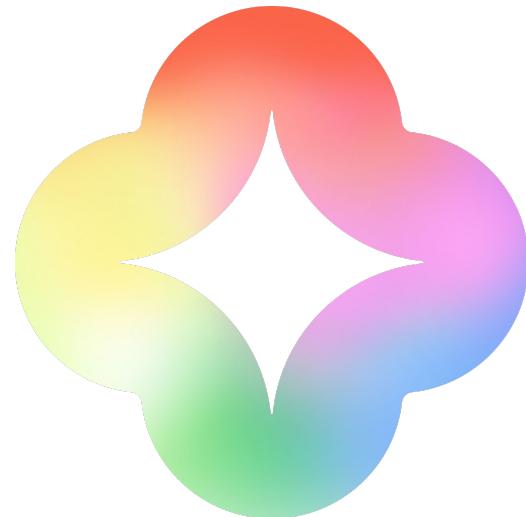

# Software delivery is a key part of Google's DNA Duet AI brings our internal learnings to everyone

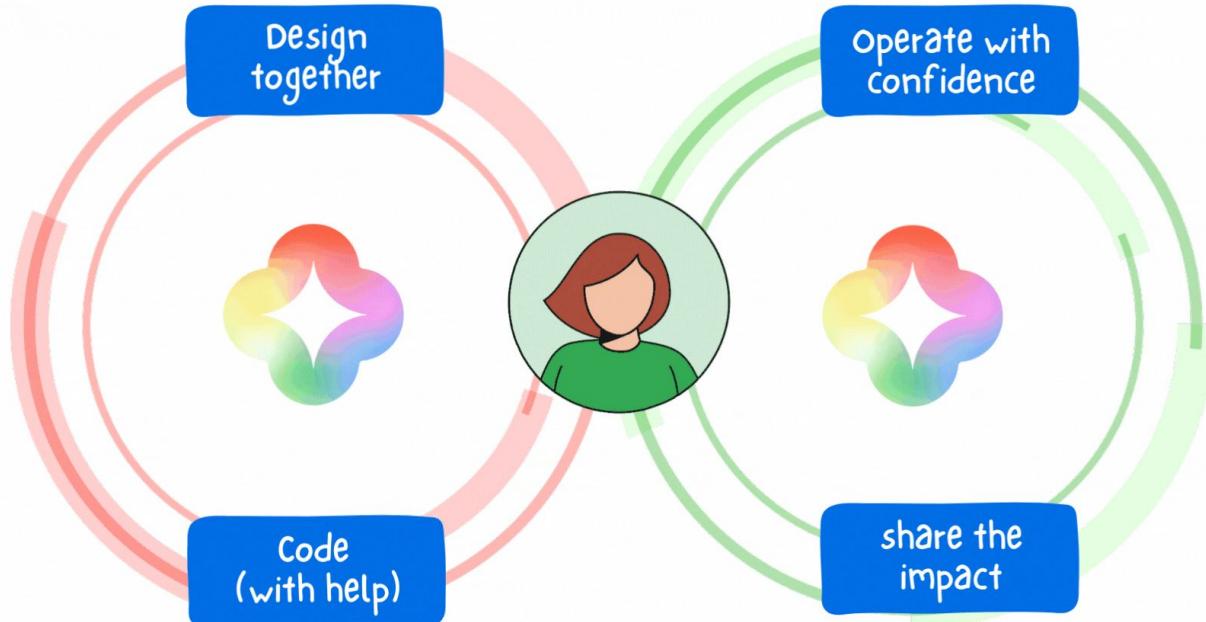

# Google uses Duet AI

The first customer to enable Duet AI for day-to-day development. Google internal usage **improved** the capabilities making Duet enterprise-ready:

# Hands-On with Duet AI

Proprietary + Confidential

# Journey 1: AI Code completion

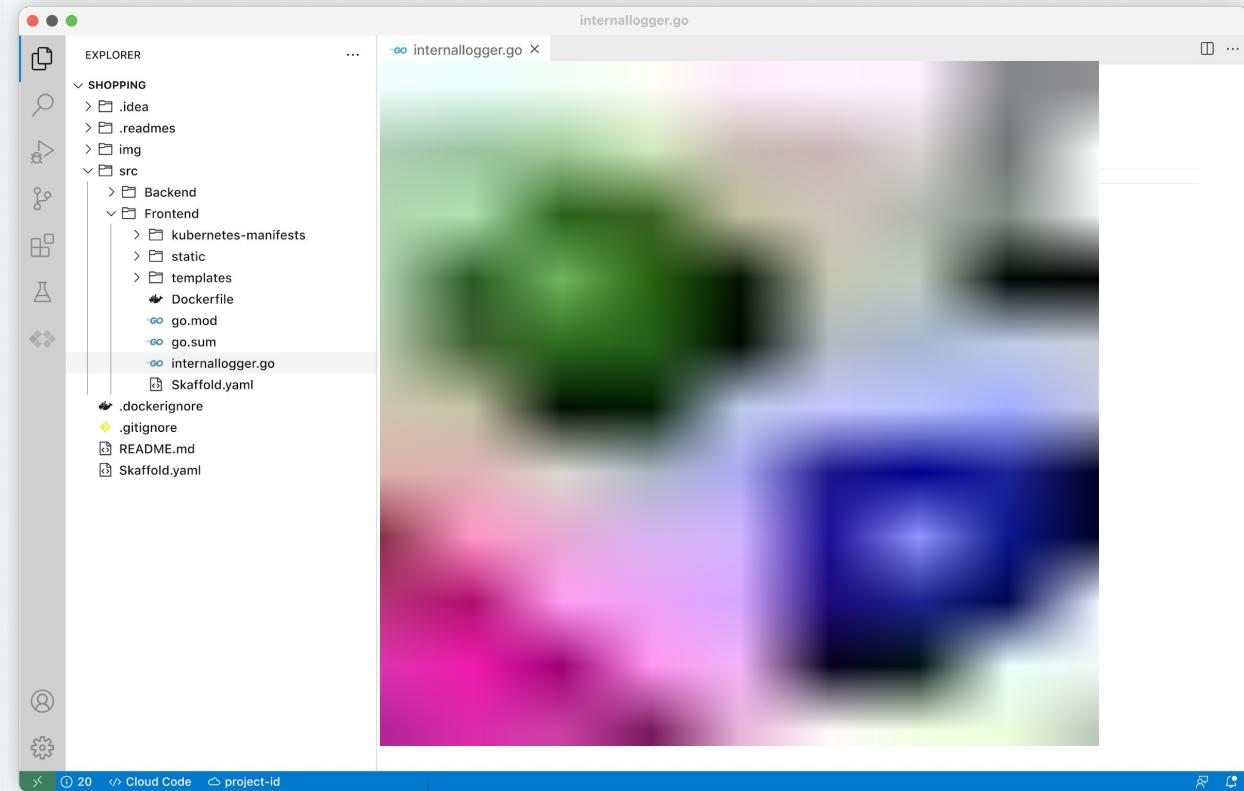

## Assistive Development

Devs can **write high quality code faster** and stay in a **flow** state longer so to can be productive translating their idea into code.

Real time code completion/generation and autofix suggestions within IDE.

### IDE Coverage

2023 Target  
Stretch goal

The screenshot shows a code editor interface with a blurred background image. On the left, the Explorer sidebar displays a project structure for a "SHOPPING" application. The "src" directory contains "Backend" and "Frontend" sub-directories. The "Frontend" directory includes "kubernetes-manifests", "static", "templates", "Dockerfile", "go.mod", "go.sum", "internallogger.go", and "Skaffold.yaml". Below these are ".dockerignore", ".gitignore", and "README.md". At the bottom of the sidebar, there are icons for user profile, settings, and other tools. The main editor area shows the "internallogger.go" file, which is currently empty or has a blurred preview. The status bar at the bottom indicates "Cloud Code" and "project-id".

# Journey 2: License attribution assistance

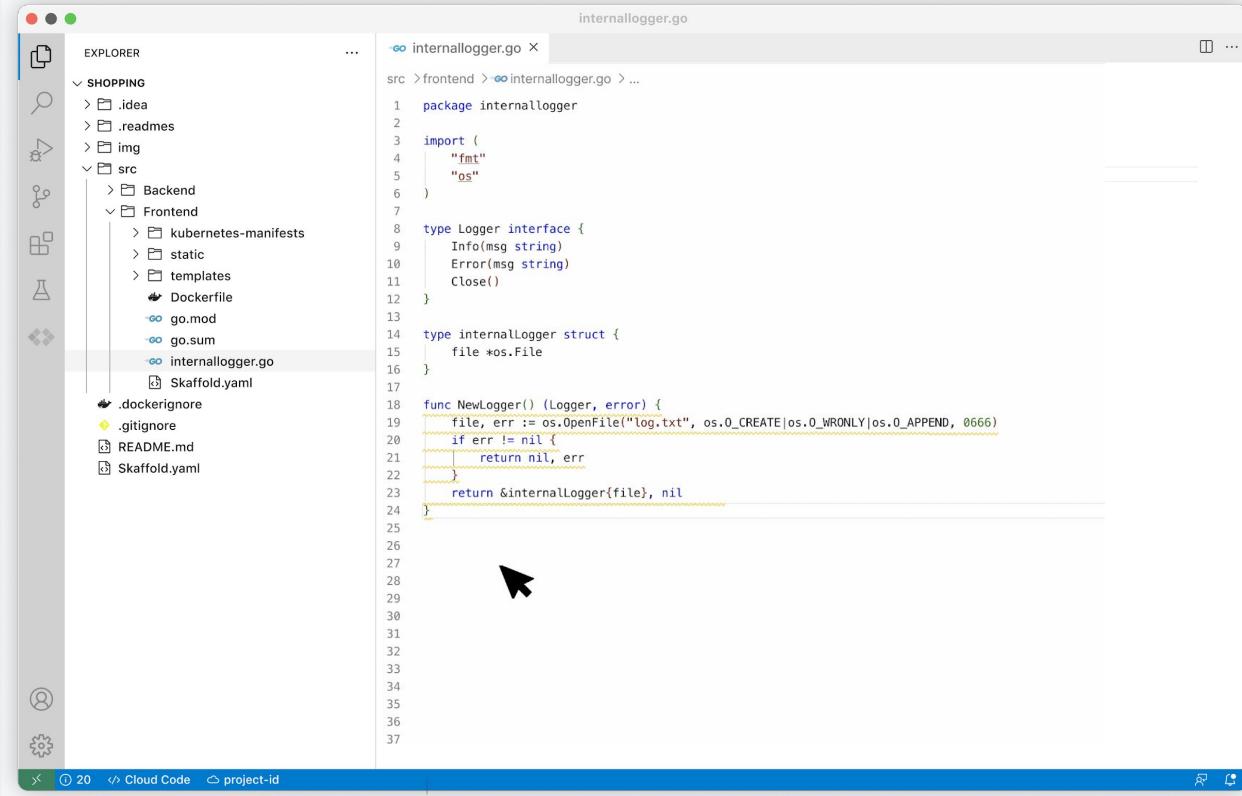

## Assistive Development

Devs are made aware when a suggestion falls under a **permissive license** and receive the information to provide license attribution, so their organization can **stay compliant with license terms**

Real time code license flagging via recitation checking.

### IDE Coverage

2023 Target  
Stretch goal

```

internallogger.go
internallogger.go X
src > frontend > internallogger.go > ...
1 package internallogger
2
3 import (
4     "fmt"
5     "os"
6 )
7
8 type Logger interface {
9     Info(msg string)
10    Error(msg string)
11    Close()
12 }
13
14 type internalLogger struct {
15     file *os.File
16 }
17
18 func NewLogger() (Logger, error) {
19     file, err := os.OpenFile("log.txt", os.O_CREATE|os.O_WRONLY|os.O_APPEND, 0666)
20     if err != nil {
21         return nil, err
22     }
23     return &internalLogger{file}, nil
24 }

# Journey 3: Explain code (Chat)

## Assistive Development

To improve test coverage for a code base a dev is not familiar with, they can I ask Duet AI to **explain the code** so to quickly and effectively understand how to start testing it.

### Key moment

Duet AI explains selected code in natural language and allowing users to ask follow up questions.

### IDE Coverage

2023 Target

Stretch goal

```

internallogger.go
src > frontend > internallogger.go > ...
internallogger.go X

1 package internallogger
2
3 import (
4     "fmt"
5     "os"
6 )
7
8 type Logger interface {
9     Info(msg string)
10    Error(msg string)
11    Close()
12 }
13
14 type internalLogger struct {
15     file *os.File
16 }
17
18 func NewLogger() (Logger, error) {
19     file, err := os.OpenFile("log.txt", os.O_CREATE|os.O_WRONLY|os.O_APPEND, 0666)
20     if err != nil {
21         return nil, err
22     }
23     return &internalLogger{file}, nil
24 }

# Journey 4.a: Test generation - Suggest a test plan (Chat)

## Assistive Development

To define a test plan to ensure the code works as intended. Devs can ask Duet AI to **suggest a unit test plan** for the code, and iterate on it to ensure good coverage of edge cases.

### ❖ Key moment

Duet AI suggest the test plan and elaborate on the edge cases

### ☒ IDE Coverage

2023 Target  
Stretch goal

A screenshot of a terminal window with a dark theme. The title bar reads "internallogger.go". The main area of the terminal is completely black, indicating no output or a blank file.

# Journey 4.b: Test generation (Chat)

## Assistive Development

Once the test plan looks good, Devs can ask Duet AI to **implement the test plan defined**

### Key moment

Duet AI generate application specific unit tests that is ready for use

### IDE Coverage

2023 Target

Stretch goal

The screenshot shows the Duet AI interface. On the left is a sidebar with various icons for file operations like open, save, search, and copy/paste. In the center, there's a "DUET AI" window containing a message: "Thanks, now please implement these tests in a single file". To the right is a code editor window titled "internallogger.go" with the following Go code:

```

internallogger.go
internallogger.go
src > frontend > internallogger.go > ...
internallogger.go
1 package internallogger
2
3 import (
4     "fmt"
5     "os"
6 )
7
8 type Logger interface {
9     Info(msg string)
10    Error(msg string)
11    Close()
12 }
13
14 type internalLogger struct {
15     file *os.File
16 }
17
18 func NewLogger() (Logger, error) {
19     file, err := os.OpenFile("log.txt", os.O_CREATE|os.O_WRONLY|os.O_APPEND, 0666)
20     if err != nil {
21         return nil, err
22     }
23     return &internalLogger{file}, nil
24 }
25
26 func (l *internalLogger) Info(msg string) {
27     fmt.Fprintf(l.file, "[INFO] %s\n", msg)
28 }
29
30 func (l *internalLogger) Error(msg string) {
31     fmt.Fprintf(l.file, "[ERROR] %s\n", msg)
32 }
33
34 func (l *internalLogger) CymbalEvent(msg string) {
35     fmt.Fprintf(l.file, "[EVENT] %s\n", msg)
36     // call event counter service
37 }

```

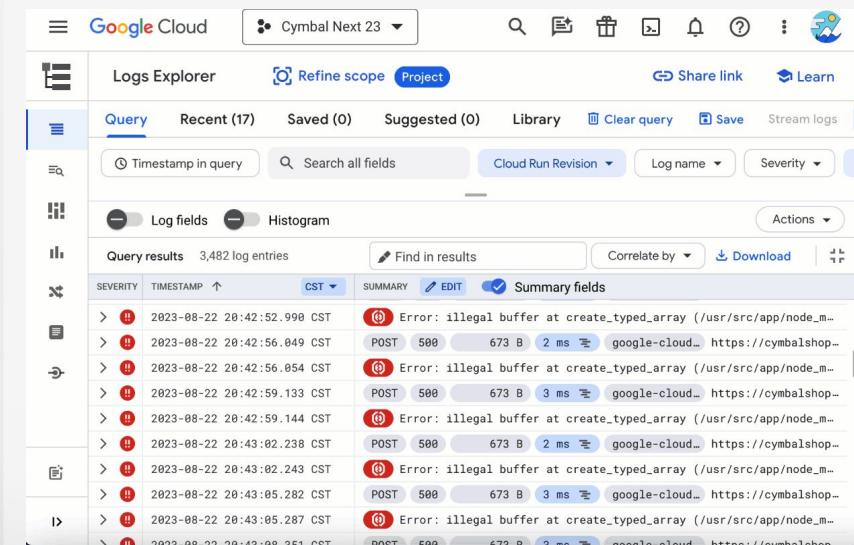

At the bottom of the code editor, there's a text input field with the placeholder "Enter a prompt here" and a send button icon.

# Log analysis using Duet AI

Duet AI helps get from **error to root cause analysis faster**

Duet helps understand the errors in more detail

With Duet AI you can use natural language to describe how to modify the search query

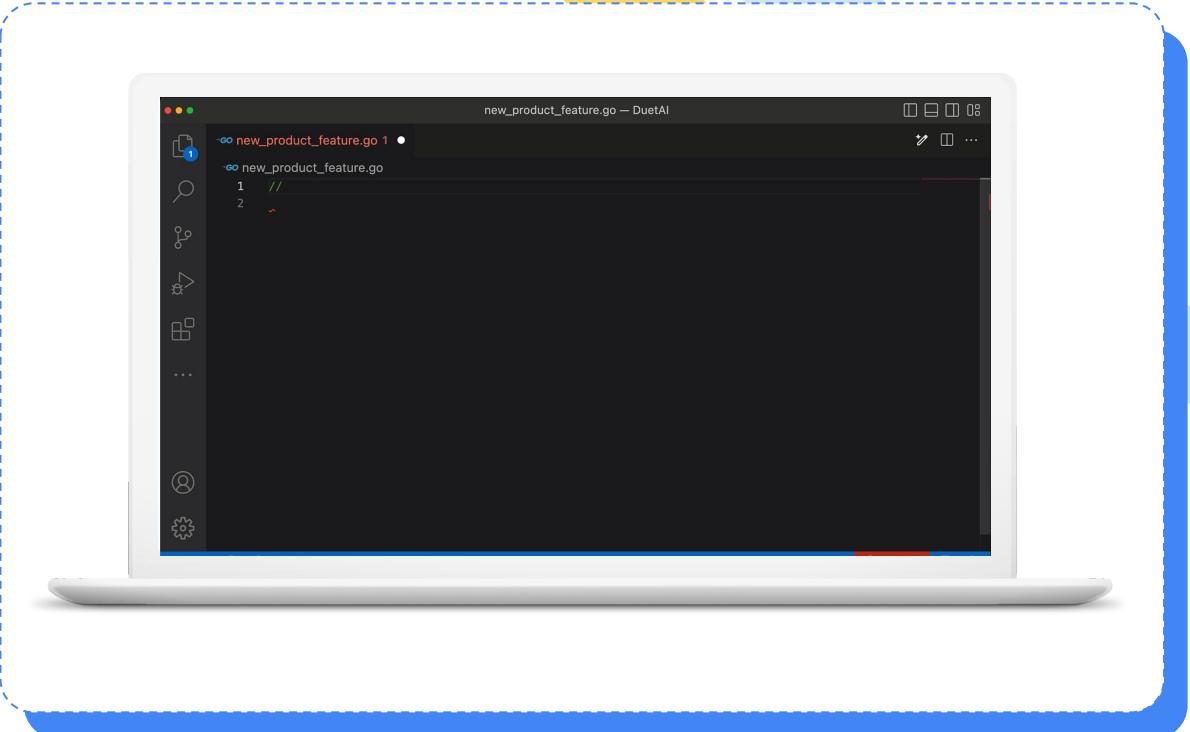

The screenshot shows the Google Cloud Logs Explorer interface. At the top, there's a navigation bar with 'Google Cloud' and 'Cymbal Next 23'. Below it is a toolbar with various icons for search, export, and sharing. The main area is titled 'Logs Explorer' and has tabs for 'Query', 'Recent (17)', 'Saved (0)', 'Suggested (0)', 'Library', 'Clear query', 'Save', and 'Stream logs'. A search bar at the top of the main area includes filters for 'Timestamp in query', 'Search all fields', 'Cloud Run Revision', 'Log name', and 'Severity'. Below the search bar, there are buttons for 'Log fields' and 'Histogram'. The results section shows 'Query results 3,482 log entries'. It lists several log entries with columns for severity (INFO, ERROR), timestamp, method (POST), status code (500), size (673 B), duration (2 ms), and a URL (google-cloud... https://cymbalshop...). Each entry also includes a detailed error message: 'Error: illegal buffer at create\_typed\_array (/usr/src/app/node\_m...)'.

# Context Aware Code Generation

Duet AI can be **customized with enterprise knowledge** based on specific company SDKs and code base to generate context-aware code.

Typically, writing such code would require very specialized knowledge.

Duet AI can save time, resourcing, training hours—all without compromising quality.

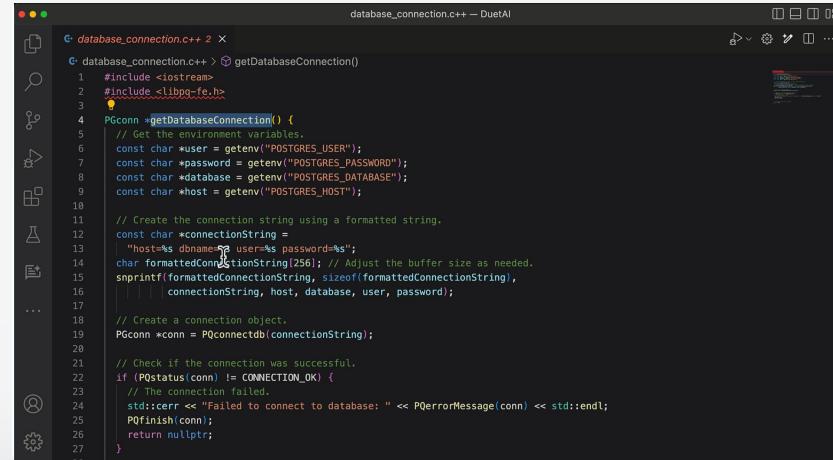

# Code Translation and Application Migration

Powerful developer features into Duet AI to push the boundary of the AI code assistance

Modernize applications faster by assisting with code refactoring

Migrate database connections to google cloud managed databases

The screenshot shows a code editor window titled "database\_connection.c++ 2" with the file path "database\_connection.c++ > getDatabaseConnection()". The code is written in C++ and uses PostgreSQL's libpq-fe.h header. It retrieves environment variables for host, user, password, and database, formats them into a connection string, and then creates a PGconn object using PQconnectdb. It checks if the connection was successful and returns a nullptr if it failed.

```
#include <iostream>
#include <libpq-fe.h>

PGconn *getDatabaseConnection() {
    // Get the environment variables.
    const char *user = getenv("POSTGRES_USER");
    const char *password = getenv("POSTGRES_PASSWORD");
    const char *database = getenv("POSTGRES_DATABASE");
    const char *host = getenv("POSTGRES_HOST");

    // Create the connection string using a formatted string.
    const char *connectionString =
        "host=%s dbname=%s user=%s password=%s";
    char formattedConnectionString[256]; // Adjust the buffer size as needed.
    sprintf(formattedConnectionString, sizeof(formattedConnectionString),
            connectionString, host, database, user, password);

    // Create a connection object.
    PGconn *conn = PQconnectdb(connectionString);

    // Check if the connection was successful.
    if (PQstatus(conn) != CONNECTION_OK) {
        // The connection failed.
        std::cerr << "Failed to connect to database: " << PQerrorMessage(conn) << std::endl;
        PQfinish(conn);
        return nullptr;
    }
}
```

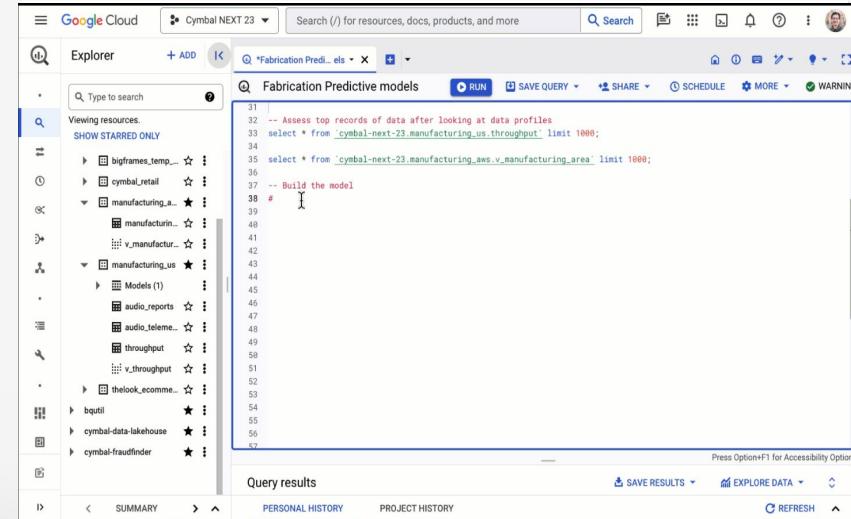

Duet AI responds to a natural language prompt through chat interface and converts a function to Go use SQL

# Duet AI in BigQuery

Assisted coding within the data suite of products with a chat experience to increase efficiency and works with open source formats like PySpark, Beam, and Airflow

**Duet AI to help write a query** to connect data across clouds in SQL via natural language.

**Extracts features** which help create ML model. Duet AI helps **write a query to build ML model**

The screenshot shows the Google Cloud BigQuery interface. On the left, the Explorer sidebar displays various datasets and tables, such as 'manufacturing\_us' and 'audio\_reports'. The main area is a code editor with the following SQL query:

```
31 -- Assess top records of data after looking at data profiles
32 select * from `cymbal-next-23.manufacturing_us.throughput` limit 1000;
33
34
35 select * from `cymbal-next-23.manufacturing Aws v_manufacturing_area` limit 1000;
36
37 -- Build the model
38 # T
39

54
55
56
57
```

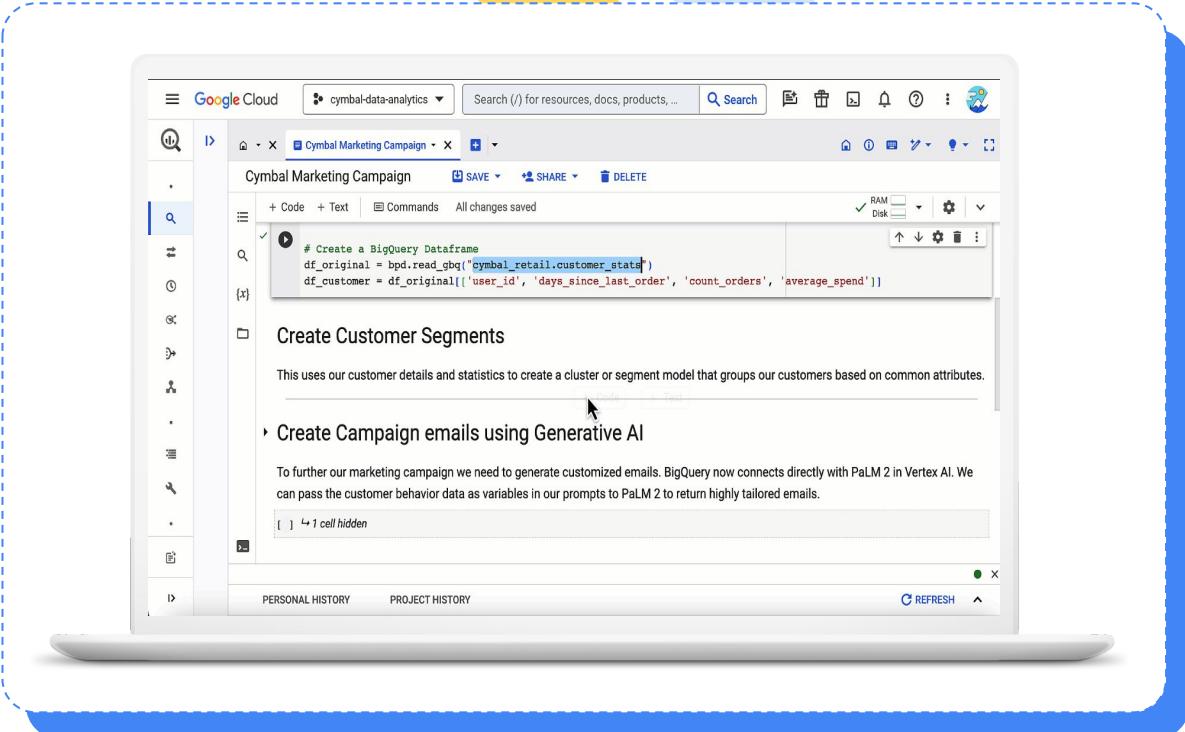

Below the code editor, the 'Query results' section is visible, showing tabs for 'PERSONAL HISTORY' and 'PROJECT HISTORY'.

# BigQuery Studio

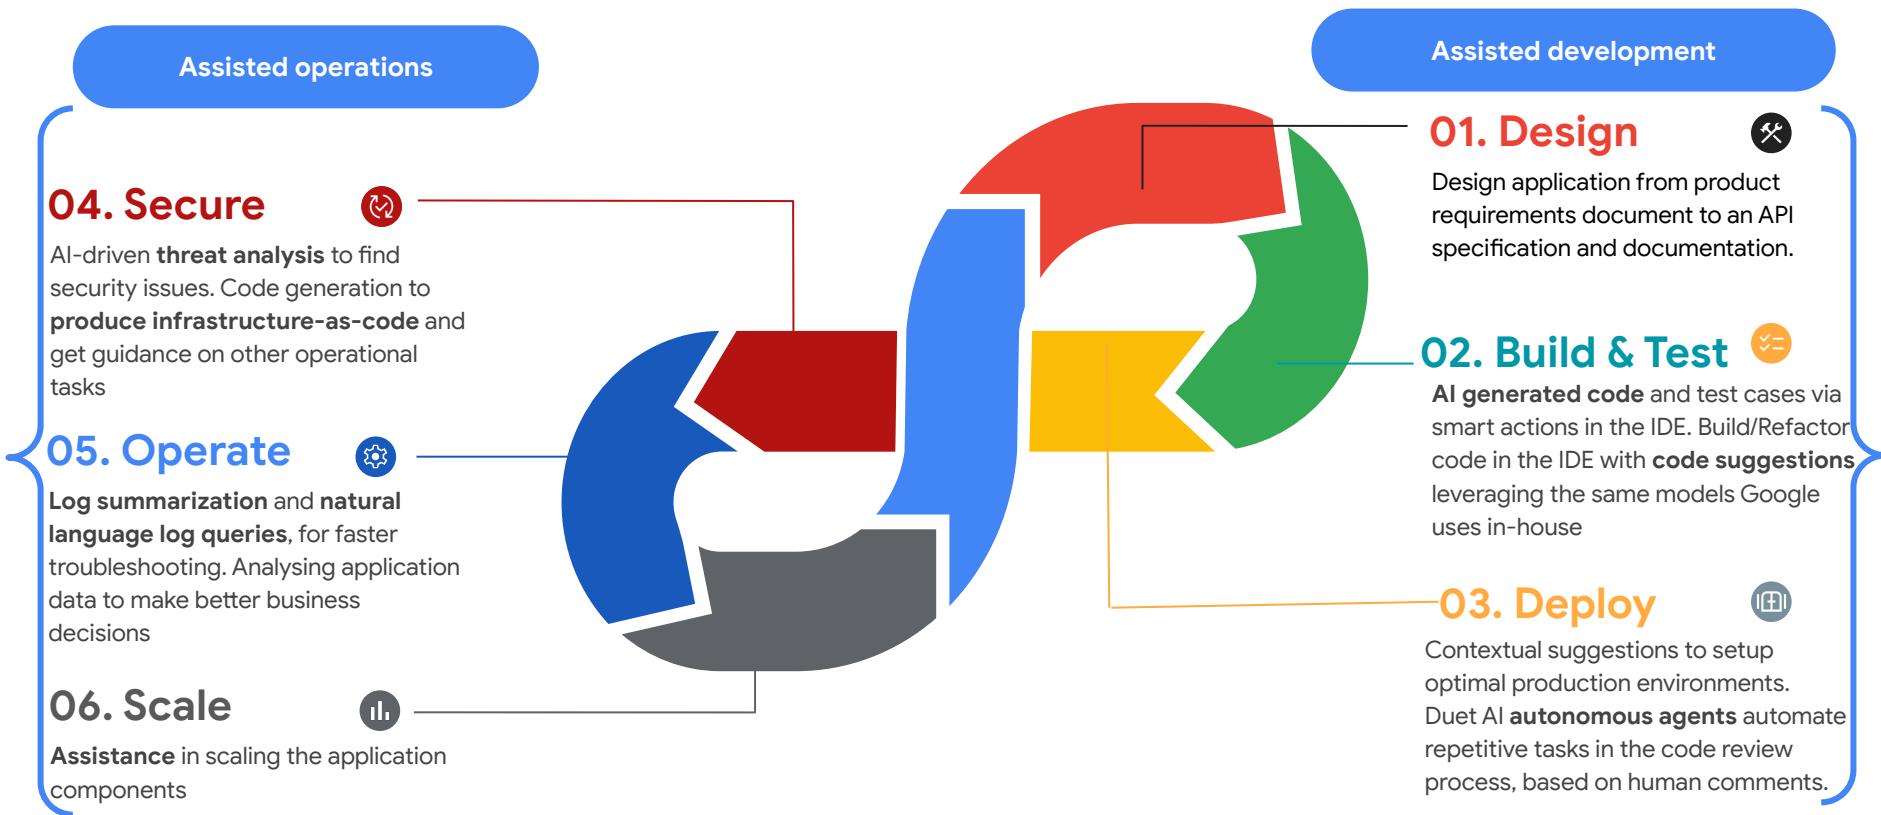

**Keeps data in place**—which saves time and lets you work with the enterprise scale and security of BigQuery

Duet AI inside the notebook helps **generate code** - segment customers

BigQuery integration with Vertex AI to **connect enterprise data directly to LLMs** - Eg: PaLM 2

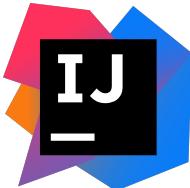

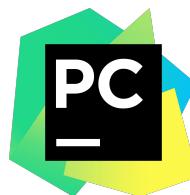

# Duet AI improves each stage of the SDLC

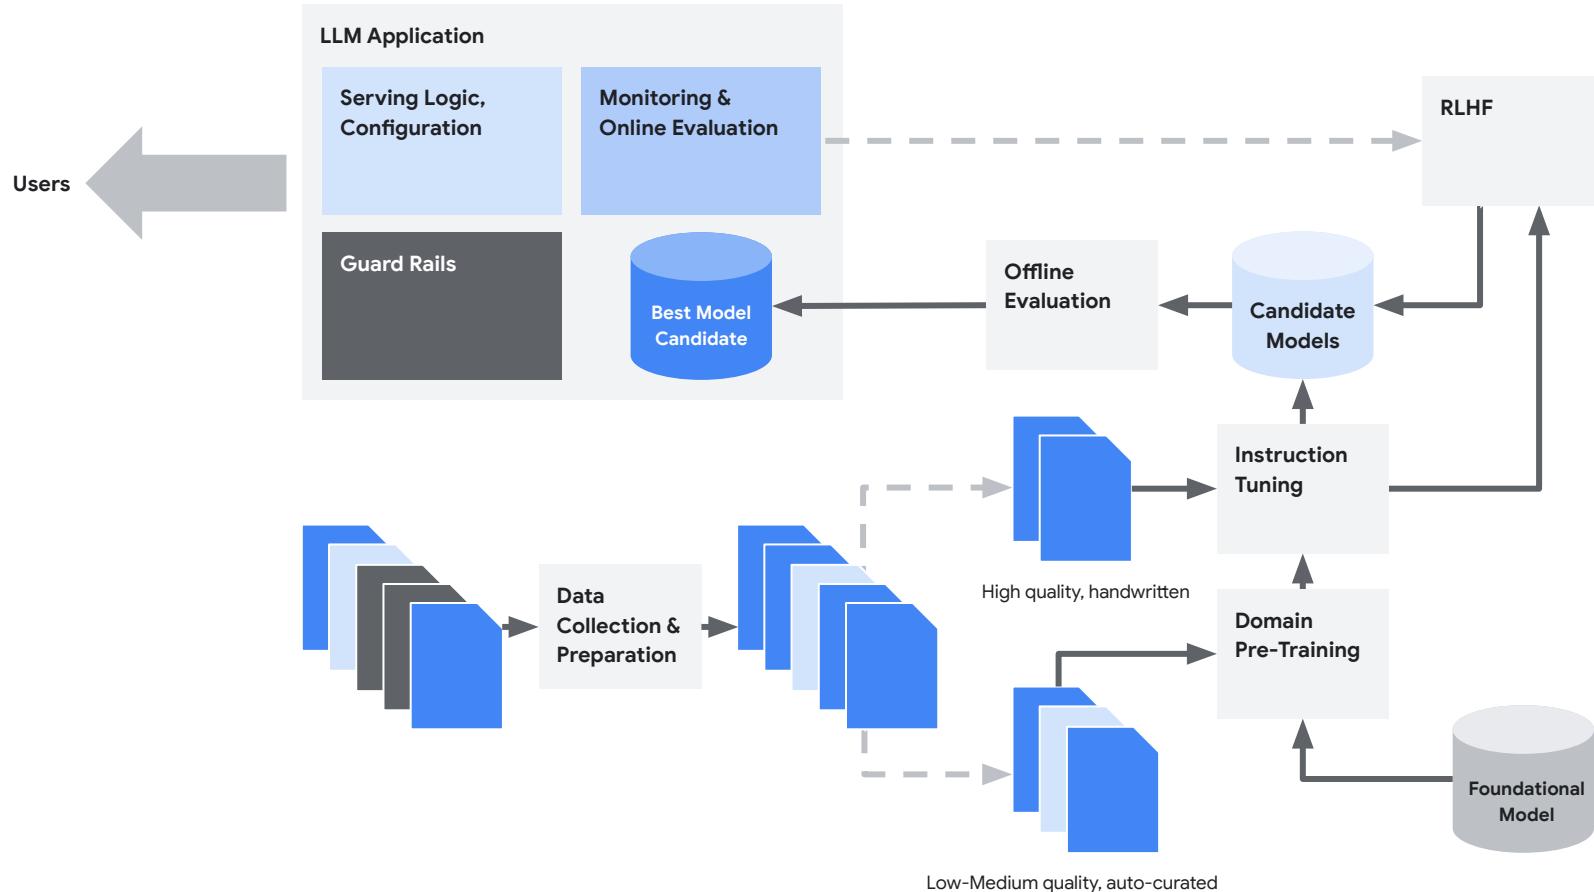

# Gen AI assistance across the most popular IDEs via the Codey API

Duet AI - Enterprise-focused

Codey enabled ecosystem

# Writing code: ~8-9% decrease in Edit-Feedback Loop

## Single-line

```
class TasksTest(googleTests.TestCase):  
    """Code that's a wake-up call that it's bad code!"""  
  
    def test_tasks_registered(self):  
        tasks = ["product_salient_terms", "query_salient_terms", "vanilla_query_salient_terms"]  
  
    def test_product_task_registered(self):  
        self.assertIsNotNone(_TaskRegistry.get("product_salient_terms"))
```

## Multi-line

```
345     case strings.HasPrefix(setting, "num_multi_token_predictions"):  
346         i, err := strconv.Atoi(strings.TrimPrefix(setting, "num_multi_token_predictions"))  
347         if err != nil || i < 0 {  
348             log.Errorf("Unexpected int setting %v with error %v", setting, err)  
            continue  
        }  
        ret.query.numMultiTok = i  
        ret.mixing.modeMultiTok = mlMultiTokAppend
```

## Idiomatic templates

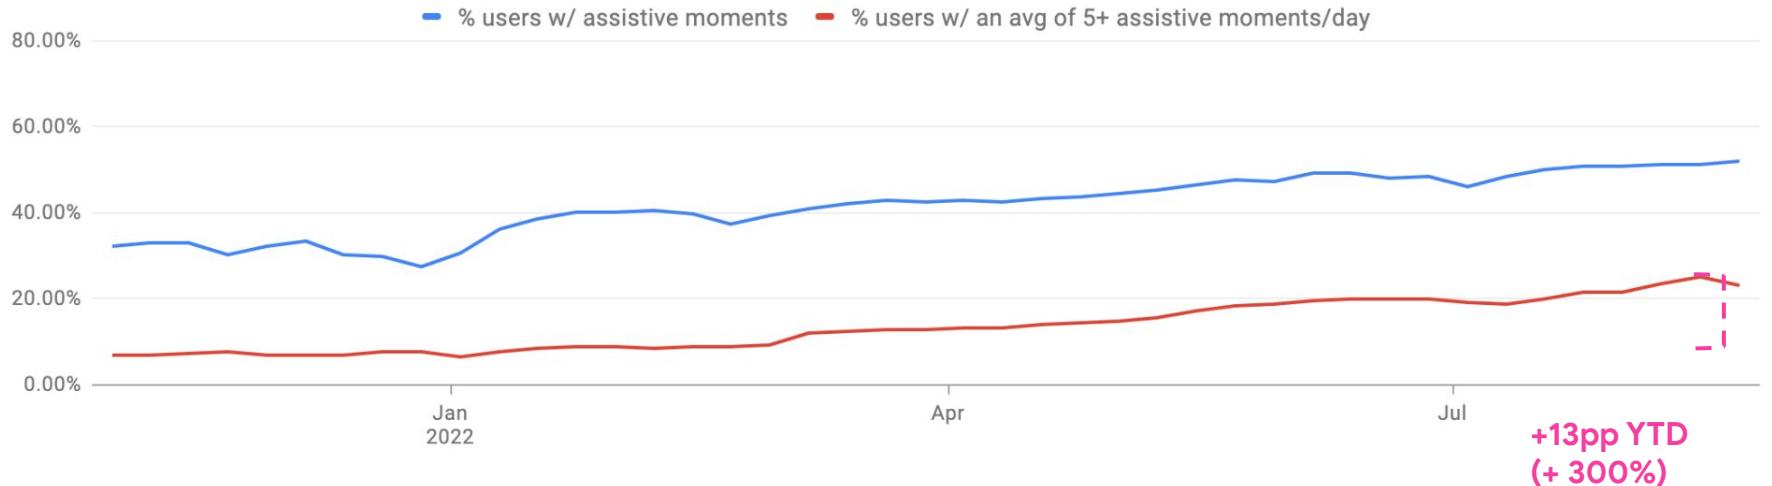

```
@parameterized.parameters((name, args) for (name, args) in GetTests())  
def testSuccess(self, name, args):  
    inception_response = text_format.Parse(  
        self.ReadFile(name + '.textproto'), service_config_pb2.Config())  
    original = self.ReadFile(name + '_inputgfe.part.cfg')  
    expectation = self.ReadFile(name + '_output.gfe.part.cfg')  
    with mock.patch.multiple(gfile, Open=self.mocked_gfile.Open,  
                             MakeDirs=self.mocked_gfile.MakeDirs),  
         mock.patch.object(inception_cli, 'GetConfig',  
                           return_value=inception_response):
```

# Impact so far

**Objective: Assistance is pervasive for SWEs:** 24% of SWEs experience assistive moments 5+ times/day

% of "active" SWEs experiencing assistive moments

# Additive value of genAI in developer environments

- Transformer network architecture invented at Google set the LLM AI revolution in motion
- PaLM2 now powering over 25 Google products and features in production
- PaLM2 as a basis for many domain specialized derivative models such as health and medicine
- Codey is our text-to-code foundation model to help improve developer velocity with code generation and code completion, and to improve code quality.

Codey model

LLM R&D (PaLM 2)

# Additive value of genAI in developer environments

- Vertex platform provides highly reliable and low latency model serving infrastructure with access to specialized and proprietary TPU hardware.
- Provides GCP-grade API security and opportunity for tenant isolation
- Duet for developers brings the power of Google's generative AI seamlessly into the developer environments and workflows in delightful and low-friction IDE integrations.

# AI Data Governance

Google Cloud's approach to governance of customer data for Cloud AI Large Models and Generative AI

By default, we do not use customer data to train our models, in accordance with [GCP Terms](#) and [Cloud Data Processing Addendum](#).

We will only use customer data as part of model training when given explicit permission to do so.

We are committed to transparency, compliance with regulations like the GDPR, and privacy best practices.

# Assistive AI Principles

These principles **provide context** for how Google will deliver **differentiation** and value across all AI assistive experiences:

1

**Uniquely Google:** Deliver experiences that leverage the breadth of Google's expertise across Core, Labs, Cloud, Search, (etc.) that provides differentiated and durable value. Example: AI LLM is informed by data from beyond the IDE and Console to include data within Google Workspace (docs, sheets, email, etc.) and/or Google Search to make more informed AI guidance

2

**Respect customer data:** We will adhere to the [GCP AI/ML Data Use Commitment](#) to respect the sovereignty of customer data, even for LLMs that are fine-tuned for specific customers. (LLMs can be trained on publicly available source code (GitHub) with permissive licenses) Won't share model with anyone else

3

**Responsible AI:** We will follow [Google Cloud's Responsible AI](#) and [AI Design pattern](#) guidance that we have shared with customers. Recitation, checking and toxicity filtering will be adopted for all source code completions

4

**Transparency Builds Trust:** While adhering to [GCP AI/ML Data Use Commitment](#), we will provide transparency on citations and what influenced the AI driven decisions and guidance wherever possible

5

**Promotes Best Practices:** Recommended secure and performant code suggestions, ops configurations, most cost-effective solutions (right size) to unlock the potential for every developer to be as effective as a Google developer

6

**Cohesive and Contextual user experience:** AI Assistance will be presented in-context within the user's workflow across "inner and outer loop" GCP workflows and therefore the UI appears in multiple ways. HOWEVER, these experiences will NOT be siloed or feel disjointed, but build upon each other and understand their context and interaction with the user

7

**Responsive user experience:** We will design user interaction models that are tailored to the latency involved in leveraging different AI models which range from instantaneous (milliseconds) to slow (seconds) to long-running (minutes+)

8

**Provide Enterprise Value:** We will design for more stringent Enterprise needs, which will benefit all users.

Example: Support local (within the enterprise) AI "fine tuning" of user data, segregated, and local, to within the enterprise, with opt-in engagement

# Duet AI Customization: Your Data, Your Terms
